PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience designing high-availability architectures, building CI/CD pipelines, and managing production-grade containerized workloads across cloud and on-premise environments. Core expertise in Docker, Kubernetes, Jenkins, and full-stack observability (Prometheus, Grafana, Loki). Oracle Cloud Infrastructure Certified Architect. Proven track record of leading DevOps teams, architecting zero-downtime database clusters, and implementing disaster recovery strategies that reduce MTTR and improve system resilience.

EXPERIENCE

DevOps Engineer — KocharTech

Jun 2023 – Present | Amritsar, India

- Architected high-availability system designs across 15+ production applications, eliminating single points of failure and achieving 99.9% uptime SLA across client deployments.
- Led a DevOps team of 8 engineers and interns; established code review practices, runbooks, and on-call rotation, reducing mean incident resolution time by 40%.
- Built and maintained CI/CD pipelines using Jenkins, GitLab CI, and GitHub Actions, automating build-test-deploy workflows and increasing deployment frequency from bi-weekly to multiple daily releases.
- Integrated automated Docker image vulnerability scanning using Gype into CI/CD pipelines, enforcing security gates that block deployments with critical/high CVEs and reducing production vulnerability exposure by 90%.
- Containerized 20+ microservices and legacy applications with production-optimized, multi-stage Dockerfiles, reducing average image size by 60% and deployment time by 50%.
- Deployed and managed application workloads on Kubernetes clusters, configuring Deployments, Services, Ingress, ConfigMaps, and Secrets for production-grade orchestration with rolling updates and zero-downtime releases.
- Configured and operated database clusters for high availability — MySQL (Group Replication), PostgreSQL (Streaming Replication + Patroni), MongoDB (Replica Sets), ClickHouse, Redis Sentinel, and KeyDB — including automated backup, point-in-time recovery, and failover orchestration.
- Deployed Keycloak in HA mode with SAML and OIDC integration, enabling centralized SSO across 10+ internal and client-facing applications, reducing authentication-related support tickets by 70%.
- Designed and implemented disaster recovery strategies including automated DB snapshots, cross-region backup replication, and documented recovery runbooks, achieving sub-30-minute RTO.
- Developed an in-house cloud infrastructure management portal (Python/Django) for real-time project-to-instance mapping, backup status tracking, and resource monitoring — replacing manual spreadsheet tracking for 50+ cloud instances.
- Managed production cloud infrastructure including compute provisioning, networking (VPC, firewall rules, load balancers), and DNS management.
- Automated routine operational tasks (log rotation, certificate renewal, health checks, database backup and restore validation, access reviews, infrastructure analysis, and deployment scripts) using Bash and Python, saving 10+ engineering hours per week.
- Conducted regular cloud cost analysis and optimization — rightsizing instances, eliminating idle resources, and implementing reserved capacity planning — reducing monthly infrastructure spend by 25%.

IT Intern — KocharTech

Jun 2022 – May 2023 | Amritsar, India

- Built the organization's entire monitoring and observability stack from scratch using Prometheus, Alertmanager, Grafana, Loki, and Fluentbit — covering 100+ hosts and 200+ containers.
- Wrote custom Prometheus exporters in Python to monitor business-critical application metrics not covered by default exporters.
- Designed and deployed 15+ Grafana dashboards with PromQL-based panels for infrastructure health, application performance, and alerting — enabling proactive incident detection.
- Automated daily backup of Linux user home directories to AWS S3 using Bash scripts and cron, ensuring compliance with data retention policies.
- Developed a full-stack device management and system tracking portal using Django and MQTT protocol, providing real-time visibility into 50+ active devices, remote system access, and centralized log retrieval.
- Customized and hardened a Linux distribution for organizational deployment, including pre-configured security policies, user tracking, and centralized management hooks.

Full Stack Development Intern — TheCodeWork

Jun 2021 – Oct 2021

- Developed backend APIs and services using Django and Django REST Framework for a no-code application platform.
- Built responsive frontend interfaces using VueJS and TailwindCSS.

TECHNICAL SKILLS

Cloud Platforms	OCI (Certified Architect), AWS (S3, EC2), GCP
Containers & Orchestration	Docker (multi-stage builds, optimization), Kubernetes, Docker Compose
CI/CD & Automation	Jenkins (Pipeline-as-Code), GitLab CI, GitHub Actions, Grype (image scanning), Bash scripting
Observability & Monitoring	Prometheus, Grafana, Loki, Fluentbit, Alertmanager, PromQL, custom exporters
Databases	PostgreSQL, MySQL, MongoDB, ClickHouse, Redis, KeyDB, Typesense
Identity & Access	Keycloak, SAML, OIDC, SSO
Infrastructure & HA	HA architecture design, disaster recovery, load balancing, failover, Nginx
Programming & Scripting	Python, Bash, Django, Django REST Framework
Tools	Git, Linux (RHEL/Ubuntu/CentOS), Ansible, MQTT

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Architect Associate — Oracle
- Cloud Architecture — Google Cloud Skills Boost
- Google IT Automation with Python Specialization — Coursera
- Foundations of Project Management — Coursera

EDUCATION

Master of Computer Applications (MCA) — Lovely Professional University, Punjab (2021 – 2023) | CGPA: 8.97
Bachelor of Computer Applications (BCA) — Dev Sanskriti Vishwavidyalaya, Haridwar (2018 – 2021) | CGPA: 8.0
| Academic Excellence Award
